

Clean Classrooms Keep the Future Safe

Health and wellness are critical to student development and positive student outcomes. With the school year in full swing and Covid-19 still a major concern, protecting students, teachers, and staff from the germs that can cause illness is critical.

To help schools prepare and maintain their facilities for this challenge, we have identified high-touch areas in the classroom and throughout the school that require / need regular and thorough cleaning, sanitizing and disinfecting.

Our easy to use Cleaning Protocol Reference Chart below identifies specific areas that need to be cleaned, sanitized or disinfected, either daily or after each human contact. Following these recommendations not only keeps students, teachers and staff healthy, happy and safe, it communicates to everyone in the community that health and safety are the #1 priority for the district.

Misco Products Corporation offers a complete portfolio of cleaning, sanitizing and disinfecting solutions that are purposely designed to thoroughly clean your facilities, while killing the germs and viruses – including SARS Covid-19* - that can make you sick[†]. All Misco solutions are engineered to be completely safe for everyday use.
