

Healthy Athletes Must Have Clean & Safe Facilities & Equipment

From grade school to high school and beyond, athletics is an extremely important part of student health and development. Providing clean and safe athletic facilities, equipment and spaces is critical for the health and wellness of student athletes, coaches, trainers and spectators.

With the school year in full swing and Covid-19 still a major concern, protecting students, teachers, and staff from the germs that can cause illness is critical. To help schools prepare and maintain their facilities for this challenge, we have identified high-touch areas in athletic facilities including locker rooms, showers, weight rooms, offices, training rooms and more where there is an exceptionally high risk for the growth and transmission of dangerous germs and viruses that can make athletes very sick.

Our easy to use Cleaning Protocol Reference Chart below identifies specific areas that need to be cleaned, sanitized or disinfected, either daily or after each human contact. Following these recommendations not only keeps students, teachers and staff healthy, happy and safe, it communicates to everyone in the community that health and safety are the #1 priority for the district.

Misco Products Corporation offers a complete portfolio of cleaning, sanitizing and disinfecting solutions that are purposely designed to thoroughly clean your facilities, while killing the germs and viruses – including SARS Covid-19* - that can make you sick¹. All Misco solutions are engineered to be completely safe for everyday use.
